GREENOXXY

GXY Token

CEX-Ready Whitepaper — Version 4.4

October 2026

Contract Address	Network / Standard
0x23BbB1B8cC5756E4211c859bDC774F29461478C3	Ethereum Mainnet / ERC-20
Ticker	Total Supply
GXY	100,000,000 GXY

GREENOXXY (GXY) — Verifiable Ecological Infrastructure

Rainforest Enterprise (RFE) | Ecuador | 2016–2026

© 2026 Rainforest Enterprise (RFE) | For informational purposes only

1. Executive Summary

Rainforest Enterprise (RFE) is an ecological restoration company headquartered in Ecuador since 2016, operating large-scale reforestation and agroforestry projects across more than 40,000 hectares.

The GXY Token (GREENOXXY) is a Utility and Governance Token that enables participation in a blockchain-based ecosystem supporting verified ecological restoration.

Key highlights for exchange listing:

- Established operational company with 10+ years of track record (2016–2026)
- Satellite & drone monitoring and on-chain impact reporting in preparation; first area verifications completed
- Fixed supply of 100,000,000 GXY — no inflation, no additional minting
- ERC-20 token on Ethereum Mainnet, Etherscan verified
- First centralized exchange listing: LBank (October 2026)
- Community-driven governance via off-chain DAO voting (Snapshot)
- Independent security audit planned (quotes requested from CertiK / Hacken; engagement and report targeted for Q4 2026)
- Professional market maker engaged for CEX order book stability

2. Team

The GXY project is led by:

Name	Role	Background
Kurt Schaefer	CEO & Co-Founder	10+ years of experience in environmental projects, Ecuador

Note: Team members have completed a full KYC/KYB process. Official identity documents are available for review by exchange operators upon request.

3. Problem & Solution

The Problem

- Deforestation reduces biodiversity and accelerates climate change
- Traditional carbon markets lack transparency and are difficult to access
- ESG investments lack verifiable on-chain tracking and accountability

The Solution

RFE combines real-world reforestation projects with blockchain transparency:

- Satellite and drone monitoring of the project areas (being set up; first area verifications completed)
- Blockchain-based recording and verification of ecological impact (planned)
- Community-driven governance via off-chain DAO voting (Snapshot)
- NFT-based geodata visualization tools

4. Token Design — Technical Specification

Property	Detail
Token Name	GREENOXXY
Ticker	GXY
Blockchain	Ethereum Mainnet
Token Standard	ERC-20 (standalone, non-upgradeable)
Contract Address	0x23BbB1B8cC5756E4211c859bDC774F29461478C3
Total Supply	100,000,000 GXY (fixed, no inflation, no mint function)
Decimals	18
Token Type	Utility & Governance Token
Circulating Supply (TGE)	approx. 12–18% of total supply

What GXY Enables

- Access to ecosystem functions and platform features
- Participation in off-chain DAO governance via Snapshot (voting rights)
- Staking for protocol incentives (planned — see Roadmap, delivered via a separate staking contract)
- Access to NFT-based geodata visualization tools

What GXY Does NOT Provide

- No profit sharing or dividends
- No ownership rights to land or physical assets
- No guaranteed returns
- No collateralization by physical assets

5. Tokenomics

Token Distribution

Category	Share	Tokens
Ecosystem & Reforestation Incentives	50%	50,000,000
Technology Development	20%	20,000,000
Staking Rewards	15%	15,000,000
Marketing & Partnerships	10%	10,000,000
Team	5%	5,000,000

Vesting & Allocation Schedule

The GXY token contract itself is a standard ERC-20 and does not embed vesting logic. To guarantee the schedule below transparently and on-chain, allocations will be progressively transferred into dedicated, audited vesting and lock contracts as a defined roadmap milestone (see Section 10). Until then, allocations are held and managed under the multi-sig treasury process described in Section 6.

© 2026 Rainforest Enterprise (RFE) | For informational purposes only

- Team (5%): 24-month linear vesting, 6-month cliff — enforced via dedicated vesting contract
- Marketing (10%): 12-month linear vesting — enforced via dedicated vesting contract
- Ecosystem (50%): Programmatic release according to project milestones
- Technology (20%): 18-month linear vesting
- Staking (15%): Released via the staking contract once deployed

6. Technology

Smart Contract (Deployed)

- Network: Ethereum Mainnet
- Standard: ERC-20 (fully compatible, standalone, non-upgradeable)
- Contract: 0x23BbB1B8cC5756E4211c859bDC774F29461478C3
- Etherscan verified: source code publicly verified on Etherscan
- Fixed supply: minted once at deployment; no mint function exists
- No transfer tax, no blacklist, no proxy/upgrade mechanism
- Security Audit: Planned — quotes requested from CertiK / Hacken; engagement and report targeted for Q4 2026. The report will be published upon completion

Ecosystem Components (Roadmap)

The following components are delivered as separate, dedicated contracts and processes rather than within the core token contract. This keeps the deployed token simple and auditable while the ecosystem expands in stages:

- Multi-sig treasury (Gnosis Safe) for secure fund management — planned (see Roadmap)
- Token vesting & lock contracts for Team and Marketing allocations — planned (see Roadmap)
- Staking contract for protocol incentives — planned, audited prior to launch (see Roadmap)
- Off-chain DAO governance via Snapshot — token-weighted voting, no gas cost (see Roadmap)
- NFT-based geodata visualization for project areas
- Satellite and drone monitoring with on-chain data integration (in preparation)

7. Ecological Impact

RFE is building a monitoring framework for the following ecological performance metrics, combining off-chain field data with planned on-chain reporting:

Impact Metric	Measurement Method
CO_2 sequestration in tonnes	Independent verification (planned)
Number of trees planted	By project location & geo-coordinates
Restored hectares	Satellite imagery & drone data (being set up)
Biodiversity index	Field surveys per project area

Important: These metrics are impact indicators and are not directly linked to token value.

8. Liquidity & Market Making

Current DEX Liquidity

- Uniswap V3 Pool: GXY/WETH on Ethereum Mainnet
- Target liquidity at CEX listing: min. $100,000
- LP tokens locked (min. 12 months)

Market Maker

The project works with a professional market maker to ensure stable spreads and a healthy order book on CEX platforms.

CEX Listing Strategy

Phase	Exchange	Target
Phase 1	LBank	October 2026
Phase 2	MEXC / Gate.io	Q1 2027
Phase 3	Tier-1 Exchanges	Long-term

9. Marketing Plan

Pre-Listing

- Community building: Telegram, X/Twitter, Discord — target 1,000+ active members
- Content marketing: Weekly updates on project progress and impact data
- Influencer campaign: Web3- and ESG-focused KOLs
- PR: Press releases to crypto media (CoinTelegraph, Decrypt, etc.)
- AMA sessions on Telegram and X

Listing Week

- Coordinated announcement across all channels
- Trading competition on LBank for liquidity incentives
- Community campaign with symbolic impact rewards (e.g. a tree planted in the participant’s name)
- Partnership announcements with ESG organizations

Post-Listing

- Monthly impact reports; on-chain data publication once monitoring is in place
- Off-chain governance activation and first Snapshot votes
- Expansion of project areas: Peru, Colombia (2027)

10. Roadmap

Period	Milestones
Q2–Q3 2026	Token deployed & Etherscan verified | Uniswap V3 pool (GXY/WETH) | Community building launched (website, X)
Q4 2026	LBank Listing (October 2026) | Smart contract audit (CertiK / Hacken) & publication of the report | CoinMarketCap & CoinGecko Registration | Multi-Sig Treasury Setup (Gnosis Safe) | Deploy Token Vesting Contracts (Team & Marketing) | Activate Off-Chain DAO Governance (Snapshot) | MEXC Listing Application
Q1 2027	MEXC / Gate.io / KuCoin Expansion | Launch Audited Staking Contract | First Snapshot Governance Votes | Multi-Country Projects (Peru, Colombia) | Institutional ESG Partnerships
2027+	Tier-1 CEX Applications | Scale to 100,000 Hectares | International Certification

Note: Staking, vesting enforcement, the multi-sig treasury and DAO governance are delivered as dedicated components on the timeline above, not within the core token contract. Any component that holds tokens or user funds (vesting, staking) will be independently audited before going live.

11. Compliance & Legal

- GXY is structured as a Utility Token — not a Security Token
- Legal review completed across multiple jurisdictions
- KYC/AML-compliant framework for all transactions
- No financial promises or return guarantees
- Issuer: SKM Global Trading Ltd., British Virgin Islands
- Operating company: Rainforest Enterprise (RFE), Ecuador — subsidiary of SKM Global Trading Ltd.

12. Risk Factors

Risk	Mitigation
Market volatility	Diversified company revenues, no token-dependent operations
Regulatory uncertainty	Ongoing legal counsel across multiple jurisdictions
Smart contract risks	Token is non-upgradeable with fixed supply, no mint function and no transfer tax; independent audit (CertiK / Hacken) planned for Q4 2026
Ecosystem component risks	Staking and vesting contracts independently audited before deployment
Execution risk (projects)	Experienced team since 2016, proven processes
Liquidity risk	Professional market maker, locked LP tokens
